Summary

Mechanical Engineer specializing in mechanical design, CAD modeling, and simulation, seeking an opportunity to apply my technical skills in an industrial environment. Motivated, organized, and analytical, I am eager to contribute to the development of innovative and high-performance mechanical solutions.

Education

National School of Engineers of Tunis (ENIT), Tunisia	09/2023 – present
Diploma in mechanical engineering	
The Faculty of Sciences Sfax (FSS), Tunisia	09/2021 – 06/2023
Preparatory cycle Mathematics-Physics	

Work Experience

Final year project internship	02/02/2026 – 31/07/2026
FOCUS Corporation Tunis,Tunisia	
Design and Development of a Curved Linear Motion Testing Robot for Automotive Applications Developed the mechanical design using SolidWorks , performed mechanical sizing, and validated the design through numerical simulations using ANSYS .	
Engineer internship	23/06/2025 – 31/07/2025
EMP Sfax,Tunisia	
Mechanical design project: Development of a telescopic jib crane (1T capacity) including 3D modeling on SolidWorks , material resistance calculations based on an RDM study verified by a numerical simulation on RDM6 , selection of components (cylinder, bearing, wheels, etc.) and development of innovative technical solutions.	
Worker internship	01/07/2024 – 31/07/2024
MECAFORM-EHK metal forming Sfax, Tunisia	
Immersion in a mechanical production workshop. Participation in machining and assembly operations. Observation of the operation of machine tools (lathe, milling machine, CNC machines, etc.)	

Academic Projects

End of year project	02/2025 – 05/2025
ENIT Tunis,Tunisia	
Academic project focused on the design of a tipper truck for agricultural waste transport:	
- Conducted functional study and performed 3D modeling using SolidWorks - Simulated tipping mechanism and truck structure in CATIA V5, with optimized material selection for agricultural use	
Design offices project	04/2025 – 05/2025
ENIT Tunis,Tunisia	
Academic project focused on the development of a maritime rescue robot:	
- Designed and 3D modeled a motorized floating system with remote control using SolidWorks - Integrated reinforced hydrodynamic stability, winch, and gripping clamp for safe towing of a drowning person	
Forming project	04/2025 – 05/2025
ENIT Tunis,Tunisia	
Forging and V-bending of a sheet metal using Abaqus	
Study of a test specimen made of an elasto-plastic material under tension with Abaqus	

Community Engagement

FABLAB_ENIT	09/2023 – Present
Project manager at FABLAB_ENIT, leading the development of:	
- CNC machine for printed circuit boards (PCBs) and a 3D scanner - Automated storage cabinet and battery charger	
ENIT_ECOCAR	09/2023 – 05/2025
Mechanical lead of the first Tunisian team participating in the international Shell Eco-marathon since 2014.	

Software and Technical Tools

SolidWorks — Catia — Fusion360 — Abaqus — ANSYS — python — Matlab
